

# Digital Image Processing

---

## Chapter 9: Morphological Image Processing

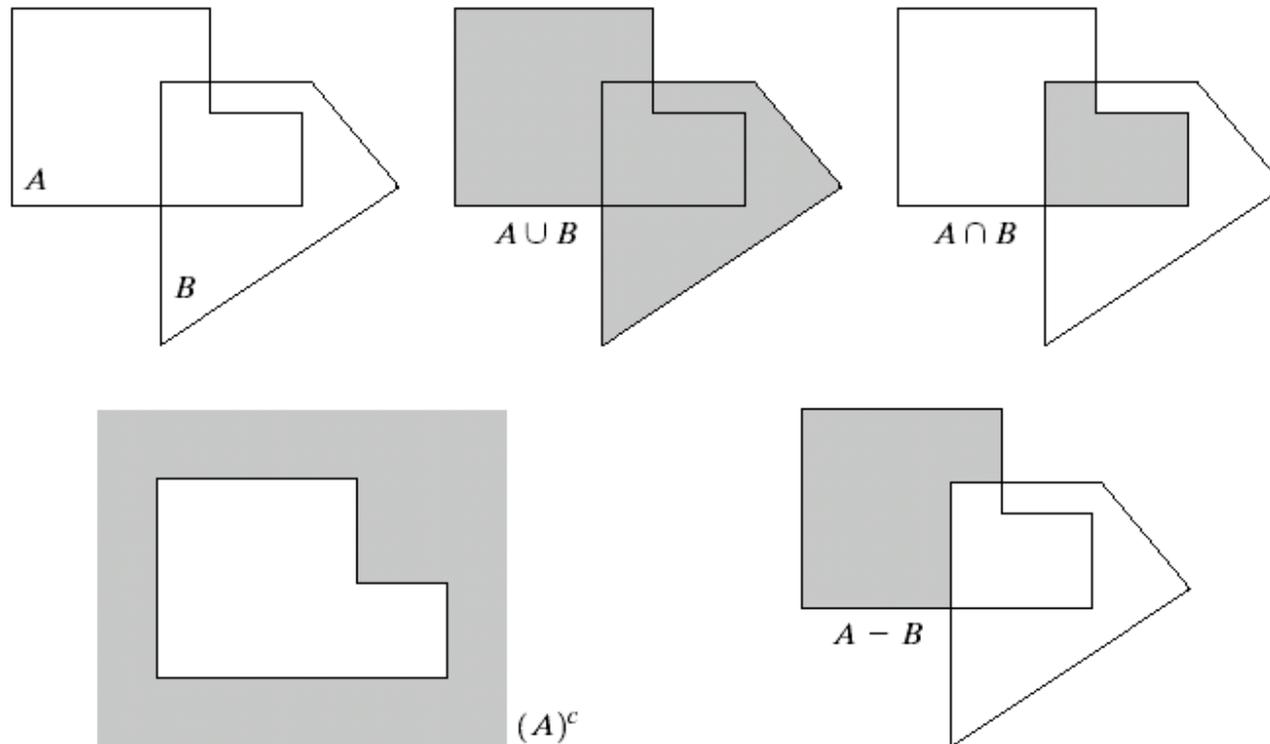

# Mathematic Morphology

---

- used to extract image components that are useful in the representation and description of region shape, such as
  - boundaries extraction
  - skeletons
  - convex hull
  - morphological filtering
  - thinning
  - pruning

# Basic Set Theory

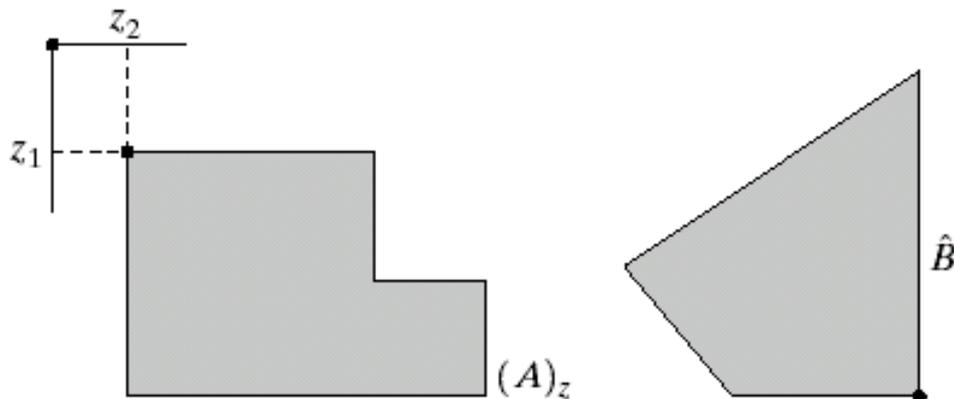

a b c  
d e

**FIGURE 9.1**  
(a) Two sets  $A$  and  $B$ . (b) The union of  $A$  and  $B$ . (c) The intersection of  $A$  and  $B$ . (d) The complement of  $A$ . (e) The difference between  $A$  and  $B$ .

# Reflection and Translation

$$\hat{B} = \{w \mid w \in -b, \text{ for } b \in B\}$$

$$(A)_z = \{c \mid c \in a + z, \text{ for } a \in A\}$$

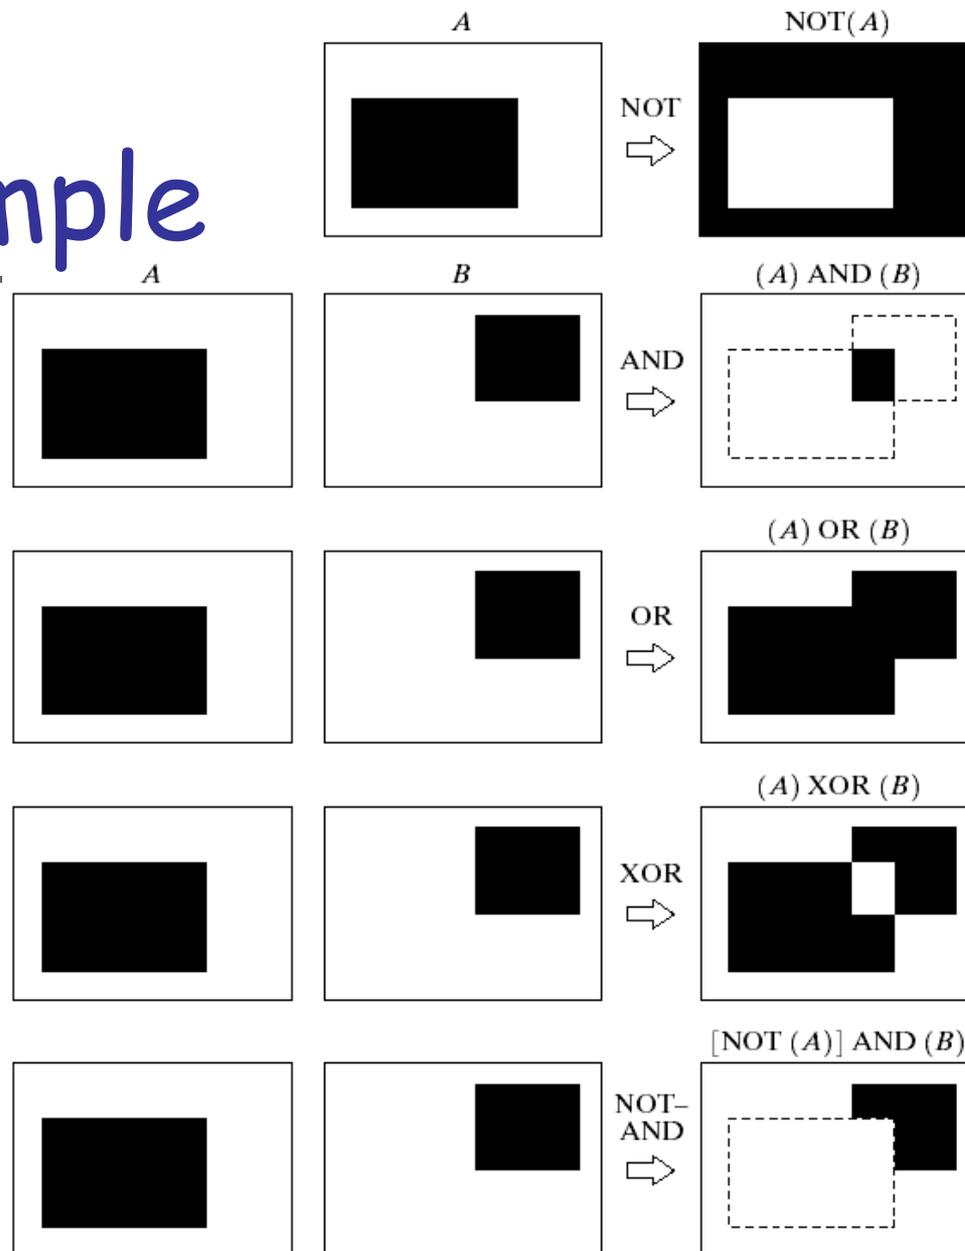

a b

**FIGURE 9.2**

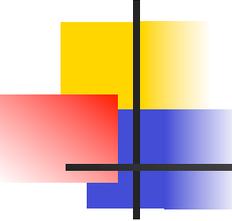

(a) Translation of  $A$  by  $z$ .

(b) Reflection of  $B$ . The sets  $A$  and  $B$  are from Fig. 9.1.

# Example

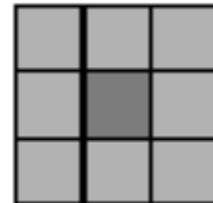

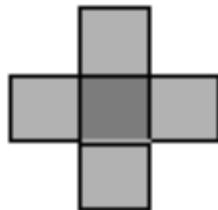

**FIGURE 9.3** Some logic operations between binary images. Black represents binary 1s and white binary 0s in this example.

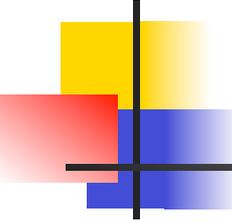

# Structuring element (SE)

---

- small set to probe the image under study
- for each SE, define origo
- shape and size must be adapted to geometric properties for the objects

# Basic morphological operations

---

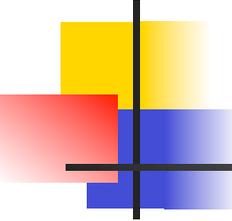

- Erosion *shrink*

- Dilation *grow*

- combine to keep general shape but  
smooth with respect to

- Opening  $\longrightarrow$  object

- Closing  $\longrightarrow$  background

# Erosion

---

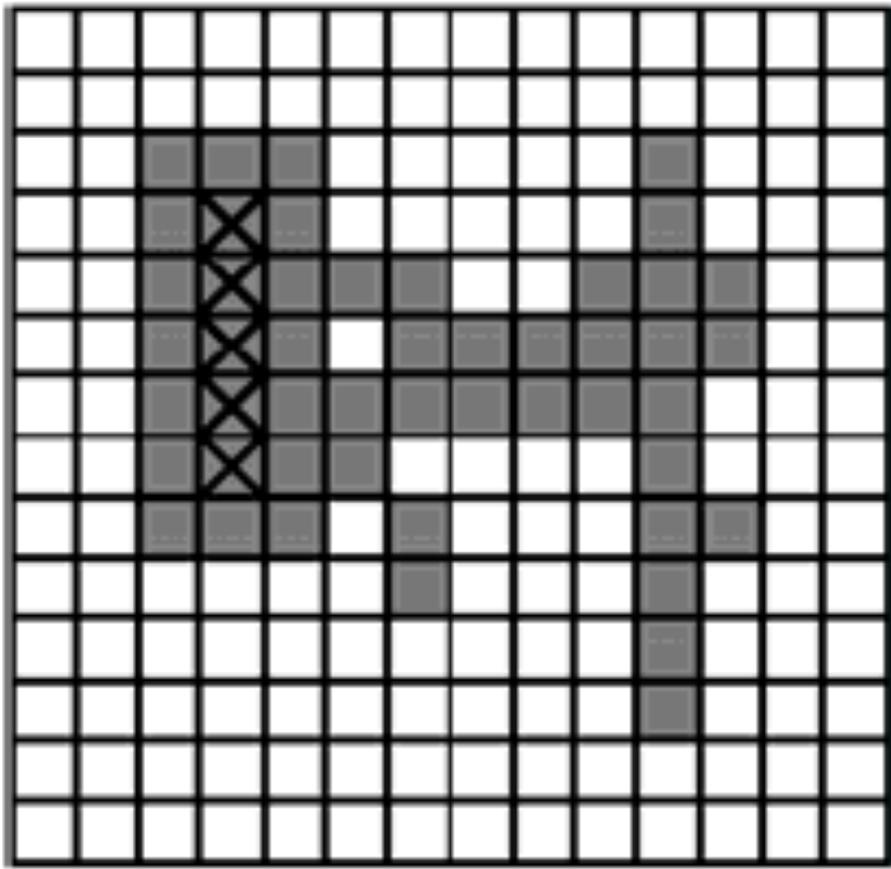

- Does the structuring element fit the set?

erosion of a set  $A$  by structuring element  $B$ : all  $z$  in  $A$  such that  $B$  is in  $A$  when origin of  $B=z$

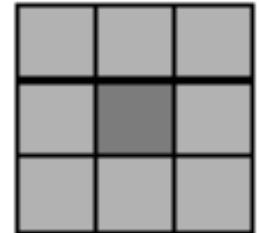

$$A \ominus B = \{z | (B)_z \subseteq A\}$$

**shrink the object**

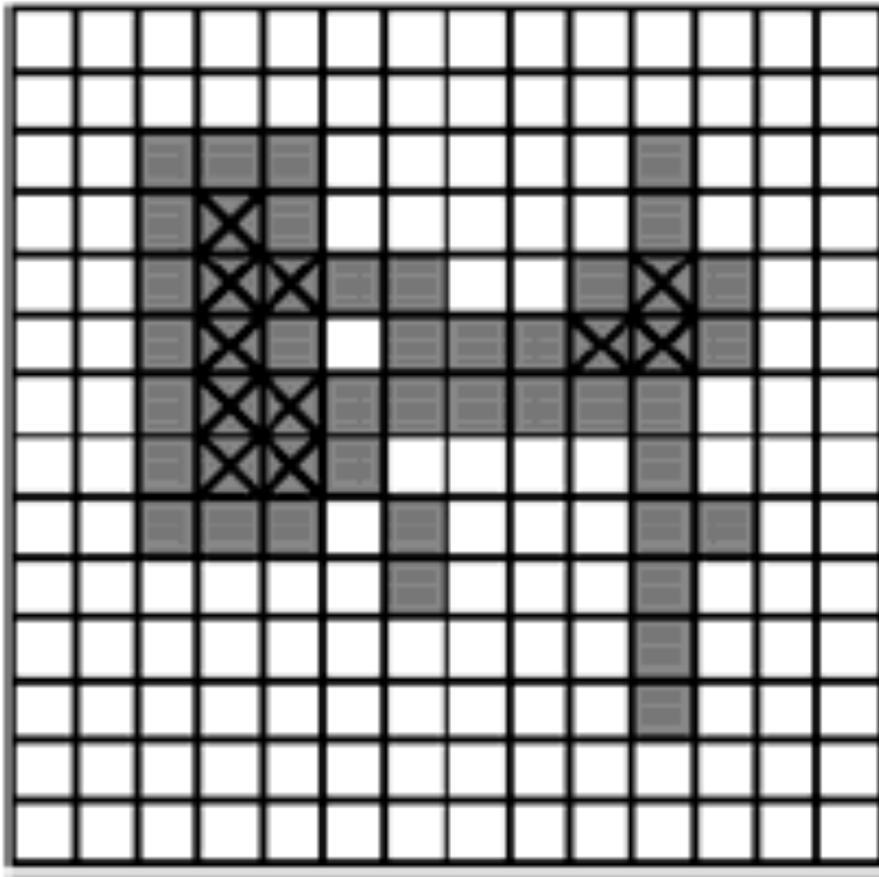

# Erosion

**FIGURE 9.6** (a) Set A. (b) Square structuring element. (c) Erosion of A by B, shown shaded. (d) Elongated structuring element. (e) Erosion of A using this element.

$$A \ominus B = \{z | (B)_z \subseteq A\}$$

# Dilation

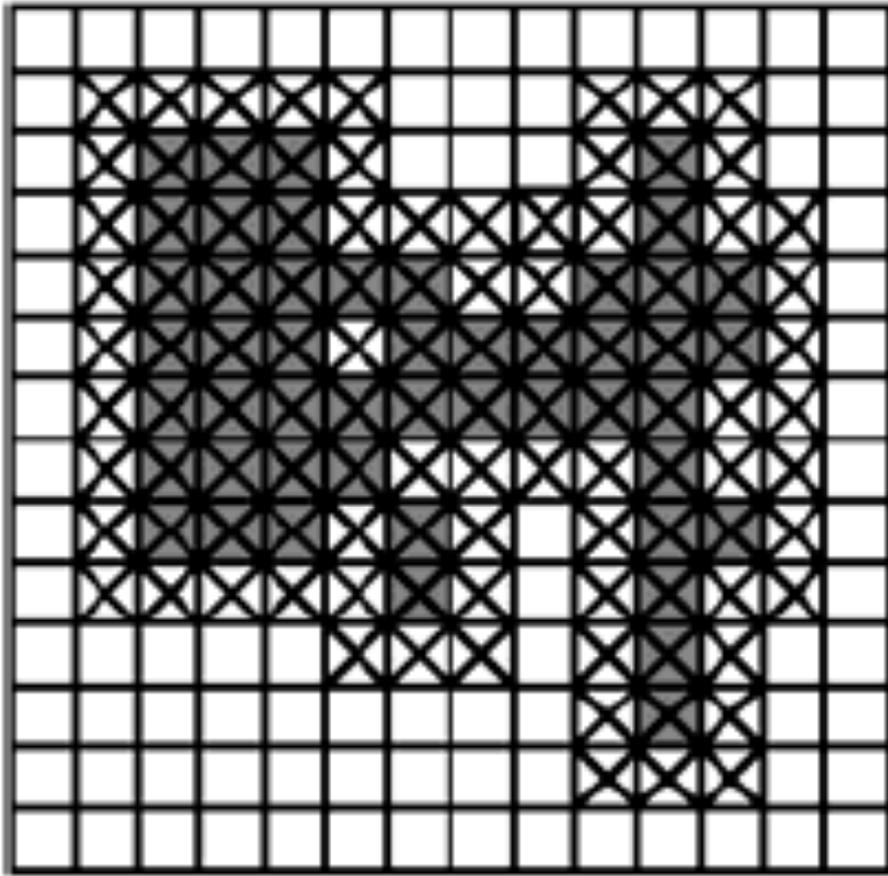

---

- Does the structuring element hit the set?
- dilation of a set  $A$  by structuring element  $B$ : all  $z$  in  $A$  such that  $B$  hits  $A$  when origin of  $B=z$

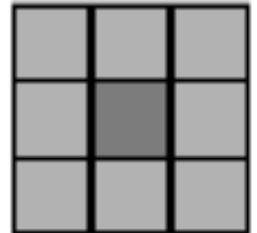

$$A \oplus B = \{z | (\hat{B})_z \cap A \neq \Phi\}$$

- grow the object

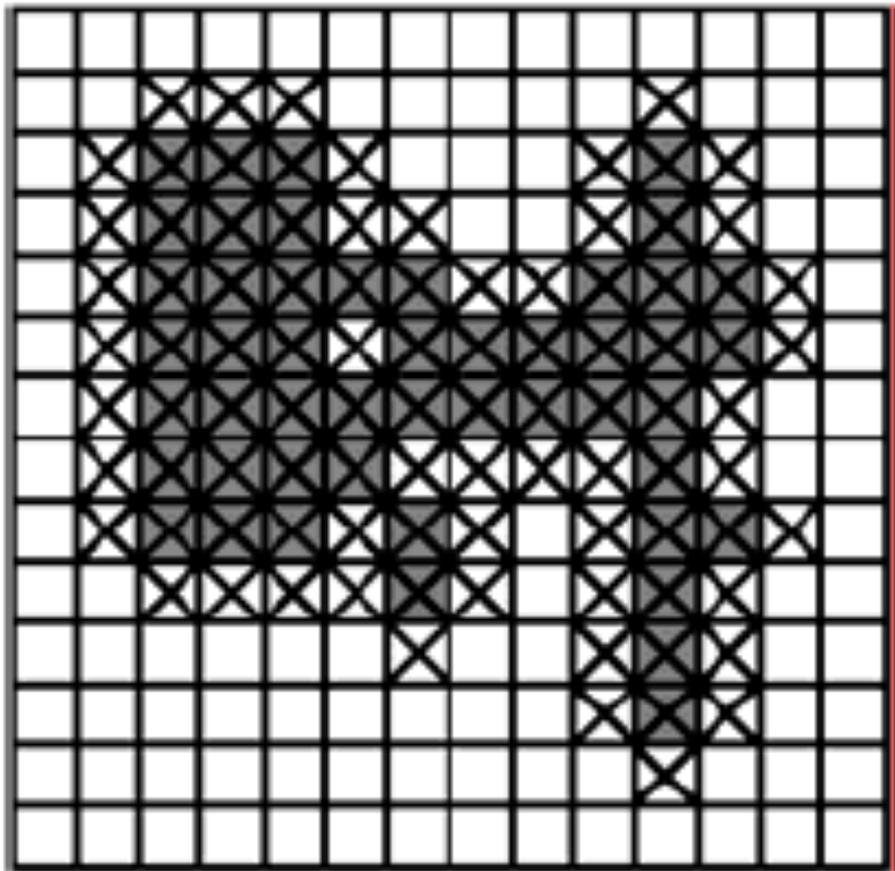

# Dilation

- (b) Square structuring element (dot is the center).
- (c) Dilation of  $A$  by  $B$ , shown shaded.
- (d) Elongated structuring element.
- (e) Dilation of  $A$  using this element.

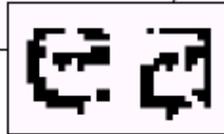

$B =$  structuring element

$$A \oplus B = \{z \mid (\hat{B})_z \cap A \neq \Phi\}$$

# Dilation : Bridging gaps

Historically, certain computer programs were written using only two digits rather than four to define the applicable year. Accordingly, the company's software may recognize a date using "00" as 1900 rather than the year 2000.

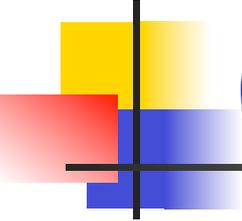

**Historically, certain computer programs were written using only two digits rather than four to define the applicable year. Accordingly, the company's software may recognize a date using "00" as 1900 rather than the year 2000.**

0	1	0
1	1	1

(a) Sample text of poor resolution with broken characters (magnified view).  
(b) Structuring element.  
(c) Dilation of (a) by (b). Broken segments were joined.

# useful

---

- erosion
  - removal of structures of certain shape and size, given by SE
- Dilation
  - filling of holes of certain shape and size, given by SE

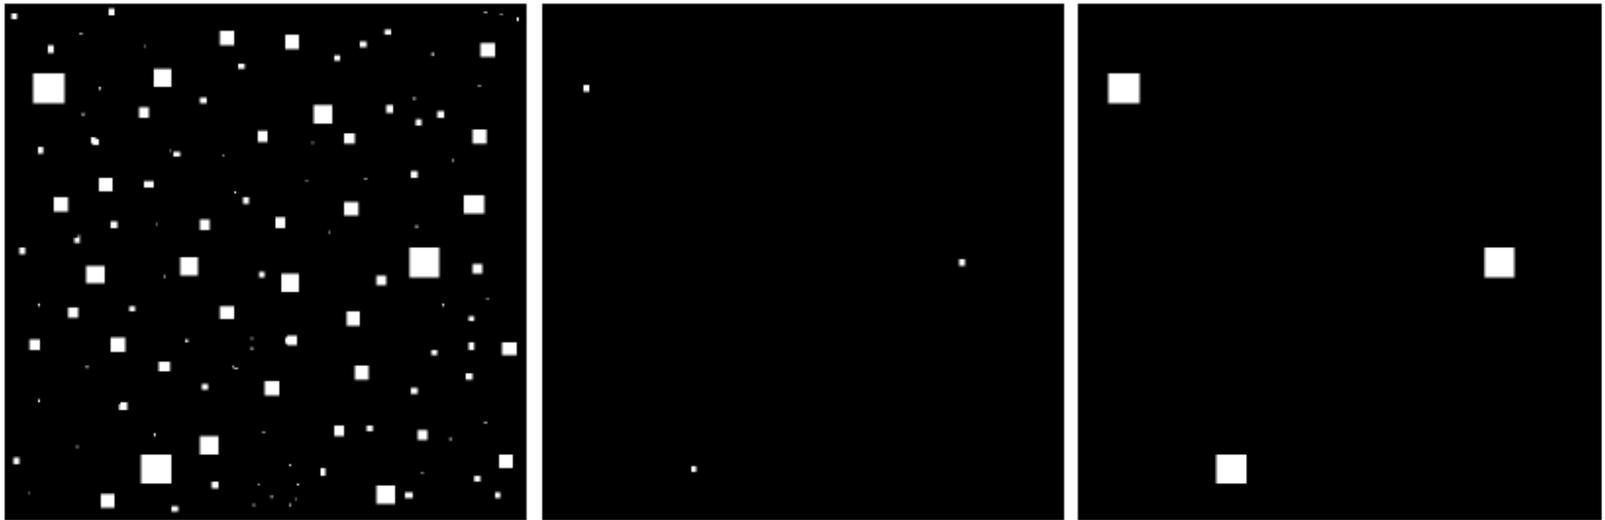

# Combining erosion and dilation

---

- WANTED:
  - remove structures / fill holes
  - without affecting remaining parts
- SOLUTION:
- combine erosion and dilation
- (using same SE)

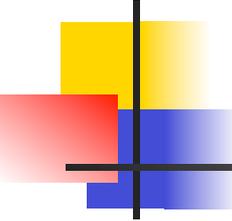

# Erosion : eliminating irrelevant detail

a b c

**FIGURE 9.7** (a) Image of squares of size 1, 3, 5, 7, 9, and 15 pixels on the side. (b) Erosion of (a) with a square structuring element of 1's, 13 pixels on the side. (c) Dilation of (b) with the same structuring element.

structuring element  $B = 13 \times 13$  pixels of gray level 1

# Opening

---

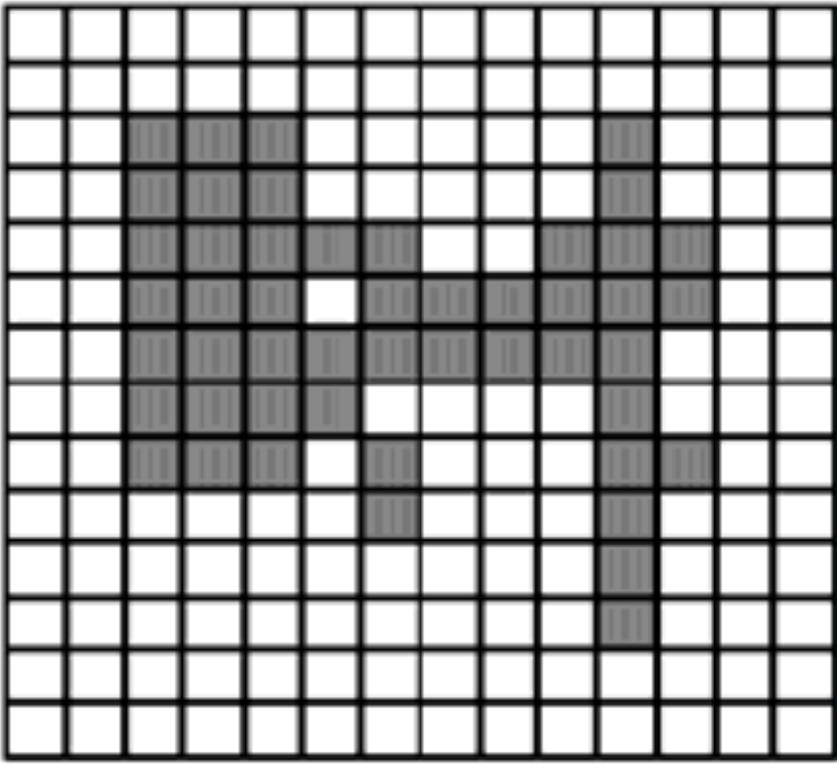

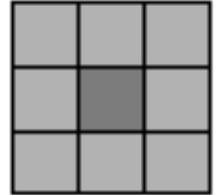

erosion followed by dilation, denoted  $\circ$

$$A \circ B = (A \ominus B) \oplus B$$

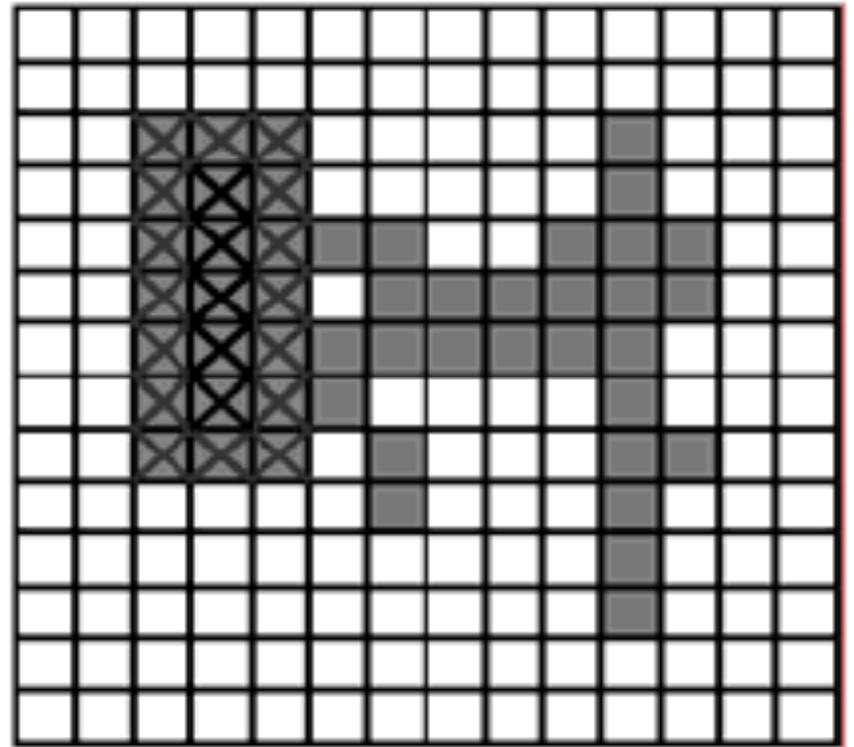

- eliminates protrusions
- breaks necks
- smoothes contour

# Opening

B=

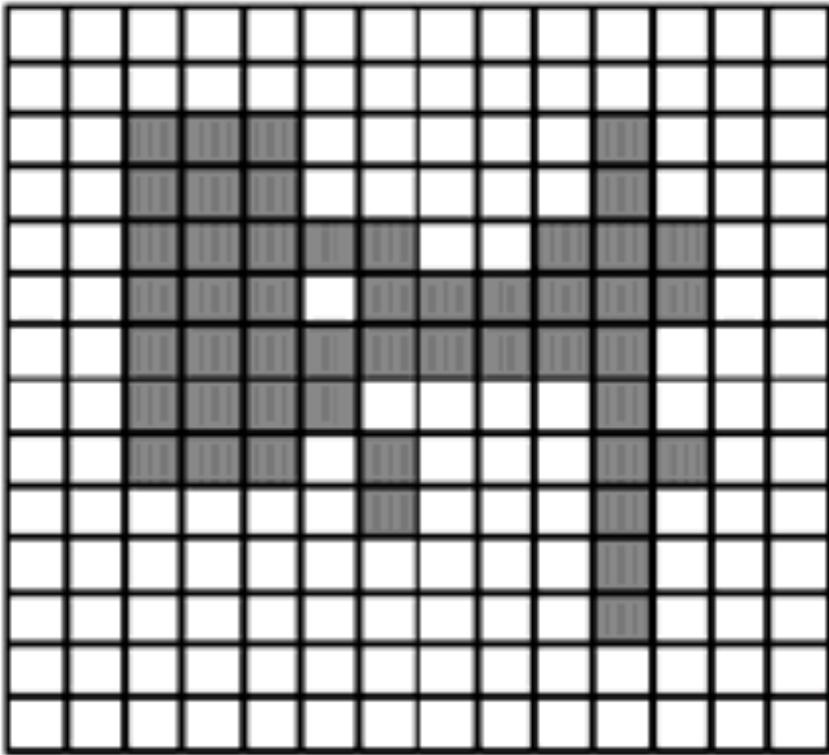

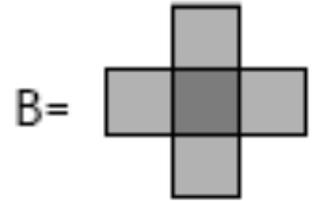

A

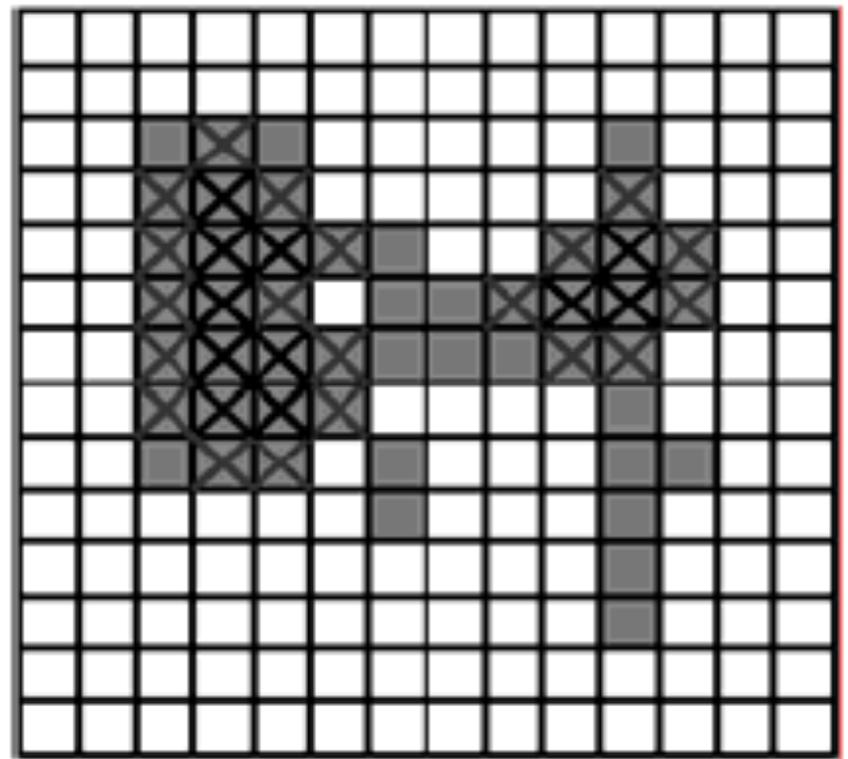

$A \ominus B$     $A \circ B$

# Opening

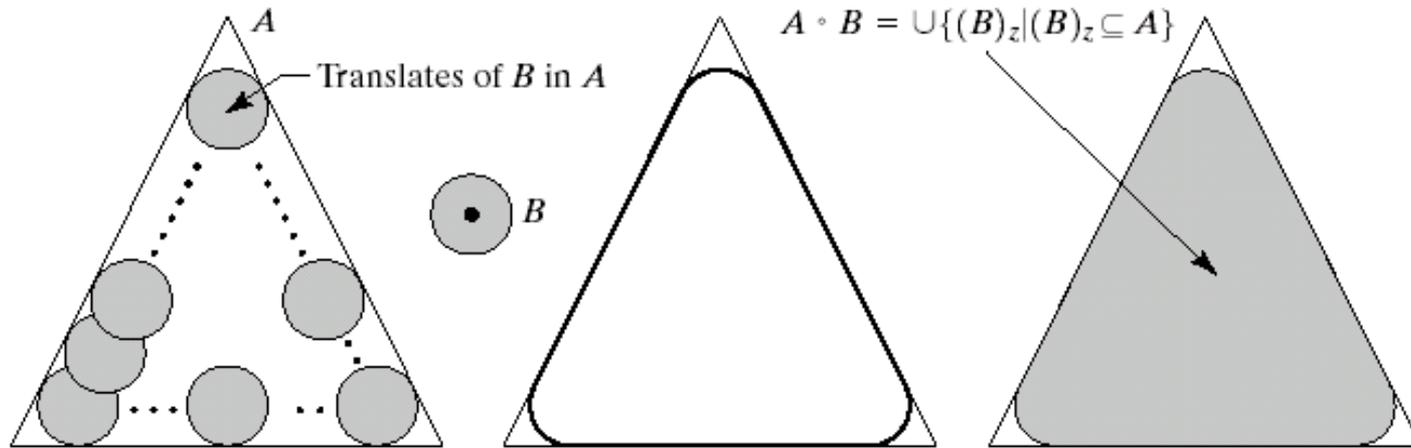

A

$A \ominus B$     $A \circ B$

# Opening

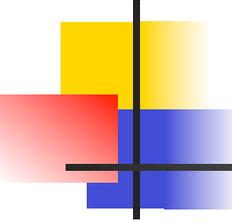

a b c d

**FIGURE 9.8** (a) Structuring element  $B$  “rolling” along the inner boundary of  $A$  (the dot indicates the origin of  $B$ ). (c) The heavy line is the outer boundary of the opening. (d) Complete opening (shaded).

$$A \circ B = (A \ominus B) \oplus B$$

$$A \circ B = \cup \{(B)_z \mid (B)_z \subseteq A\}$$

# Closing

---

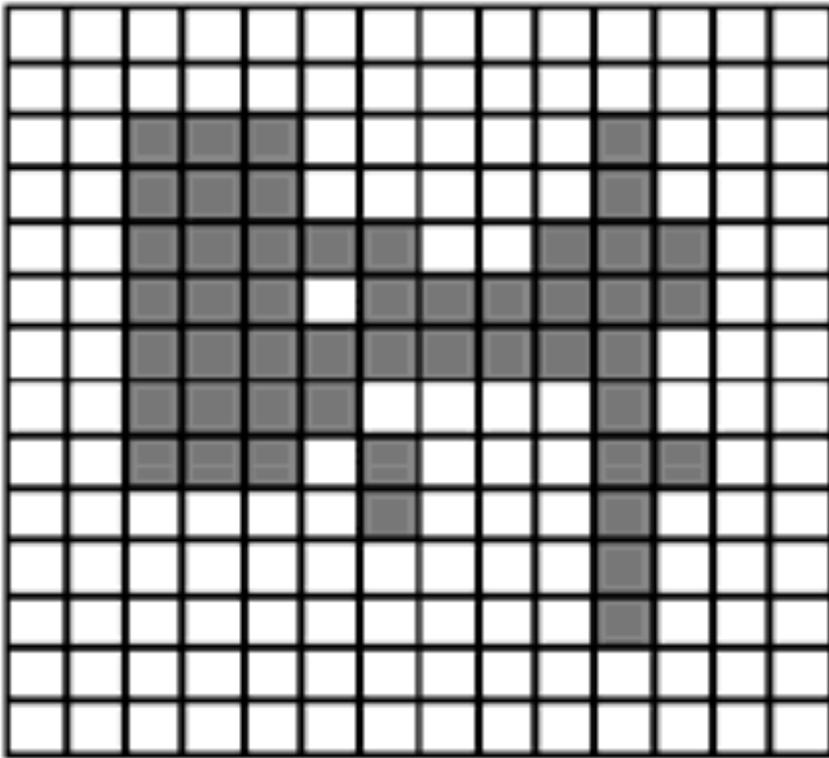

dilation followed by erosion, denoted  $\bullet$ .

$$A \bullet B = (A \oplus B) \ominus B$$

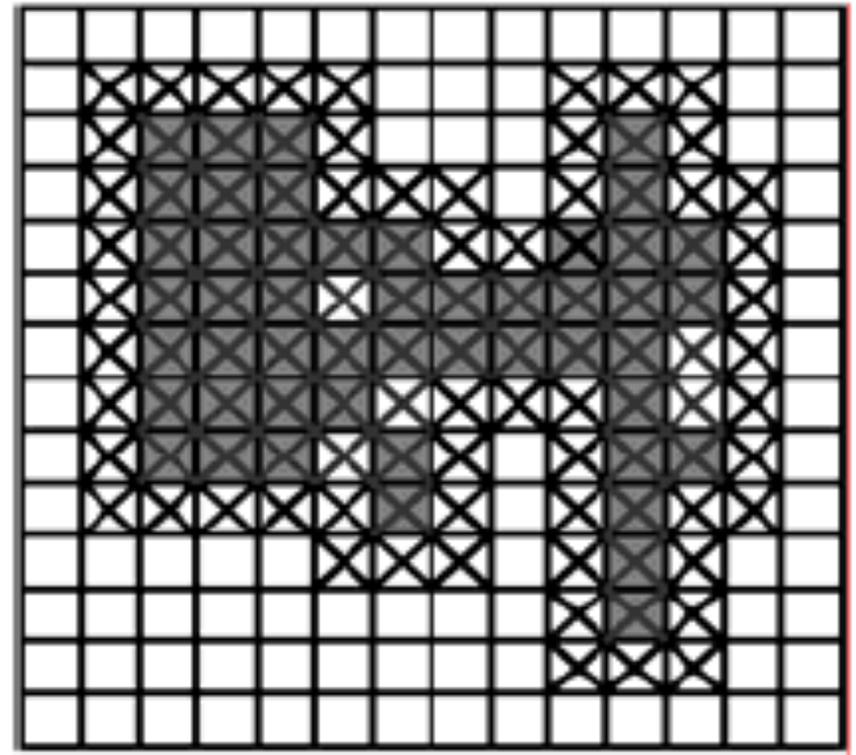

- smooth contour
- fuse narrow breaks and long thin gulfs
- eliminate small holes
- fill gaps in the contour

# Closing<sup>★</sup>

B =

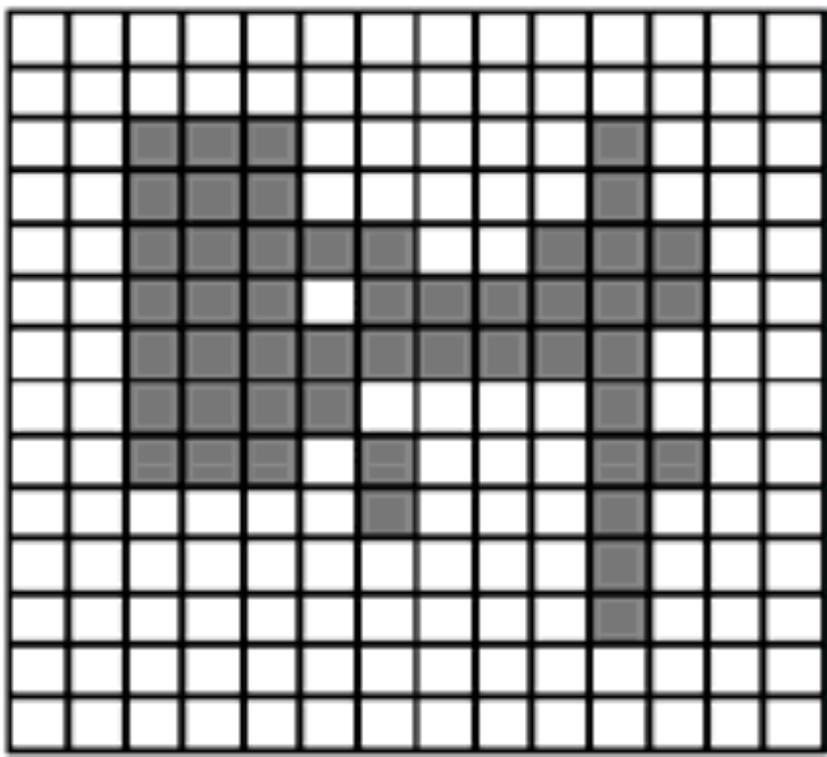

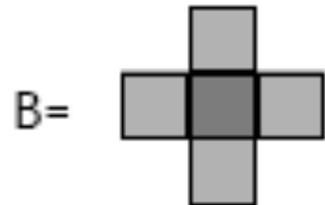

A

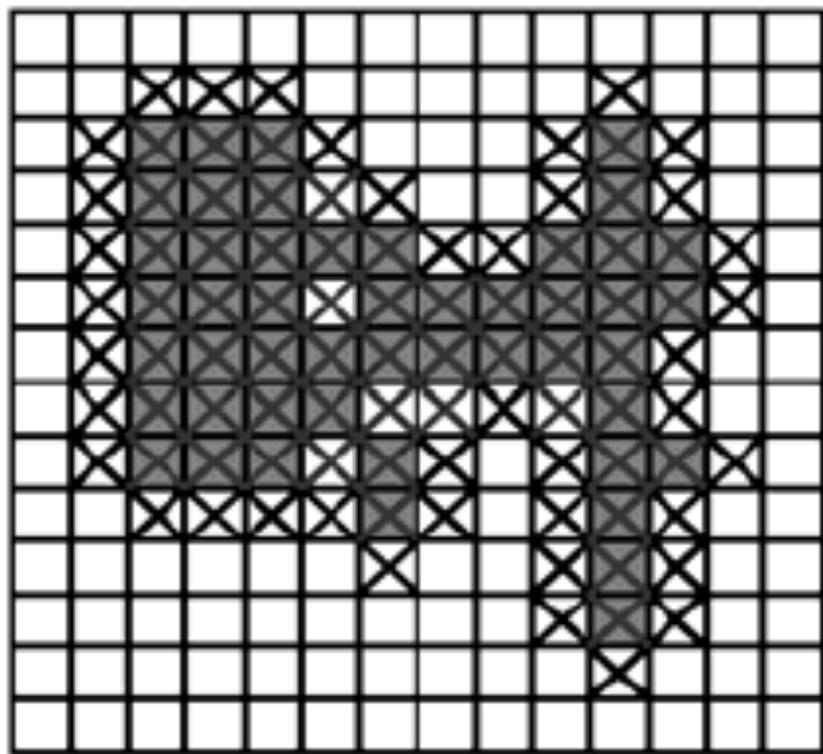

$A \oplus B$     $A \bullet B$

# Closing<sup>★</sup>

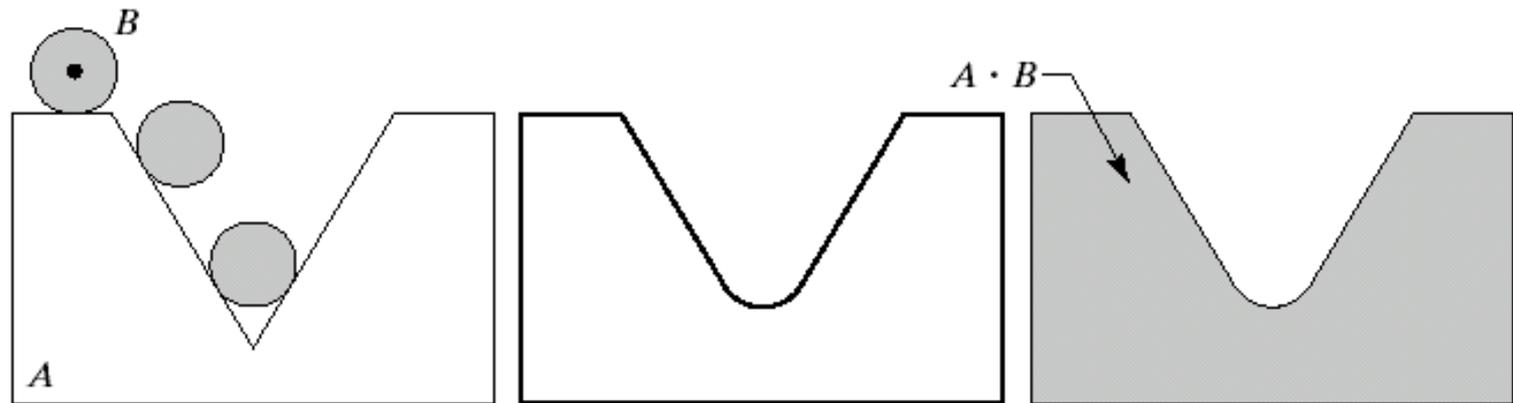

A

$A \oplus B$     $A \bullet B$

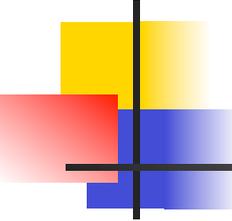

# Closing

a b c

**FIGURE 9.9** (a) Structuring element  $B$  “rolling” on the outer boundary of set  $A$ . (b) Heavy line is the outer boundary of the closing. (c) Complete closing (shaded).

$$A \bullet B = (A \oplus B) \ominus B$$

# Properties

---

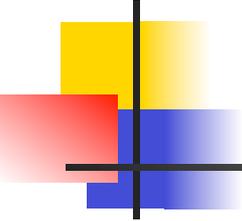

## Opening

- (i)  $A \circ B$  is a subset (subimage) of  $A$
- (ii) If  $C$  is a subset of  $D$ , then  $C \circ B$  is a subset of  $D \circ B$
- (iii)  $(A \circ B) \circ B = A \circ B$

## Closing

- (i)  $A$  is a subset (subimage) of  $A \bullet B$
- (ii) If  $C$  is a subset of  $D$ , then  $C \bullet B$  is a subset of  $D \bullet B$
- (iii)  $(A \bullet B) \bullet B = A \bullet B$

**Note:** repeated openings/closings has no effect!

# Duality

---

- Opening and closing are dual with respect to complementation and reflection

$$(A \bullet B)^c = (A^c \circ \hat{B})$$

A

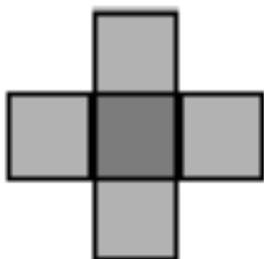

$A \ominus B$

$(A \ominus B)^C$

$B = \hat{B}$

$A^C$

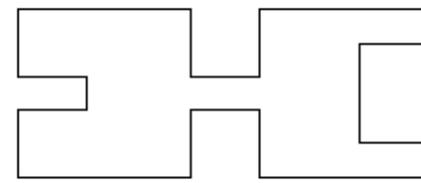

$A^C \oplus B$

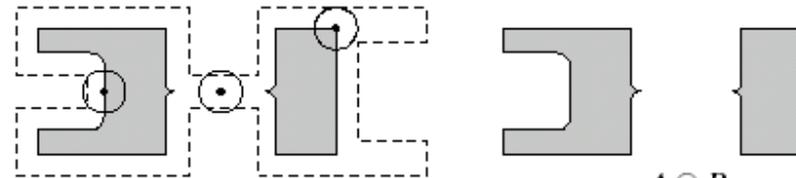

a
b c
d e
f g
h i

**FIGURE 9.10**

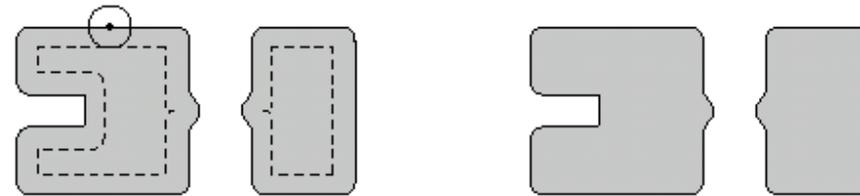

Morphological opening and closing. The structuring element is the small circle shown in various positions in (b). The dark dot is the center of the structuring element.

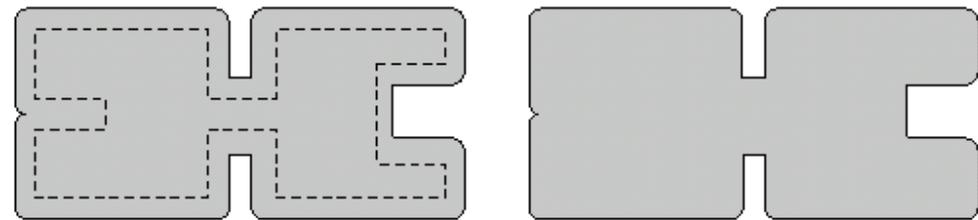

$A$

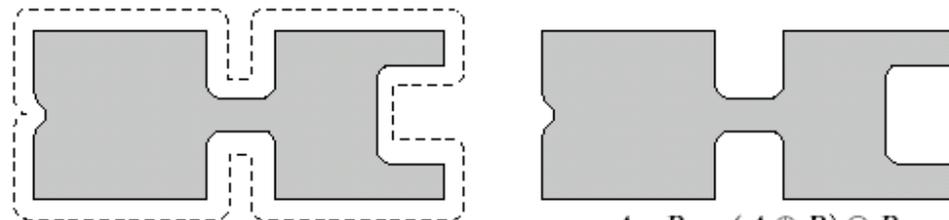

$A \ominus B$

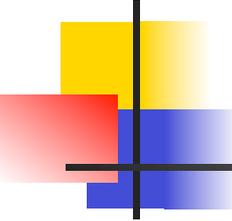

$A \circ B = (A \ominus B) \oplus B$

$A \oplus B$

$A \circ B = (A \oplus B) \ominus B$

# Useful: open & close

---

A

opening of A

→ removal of small protrusions, thin connections, ...

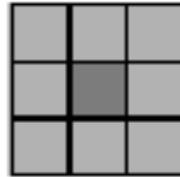

closing of A

→ removal of holes

# Application: filtering

Application:  
filtering

1. erode  
 $A \ominus B$

2. dilate  
 $(A \ominus B) \oplus B = A \circ B$

3. dilate  
 $(A \circ B) \oplus B$

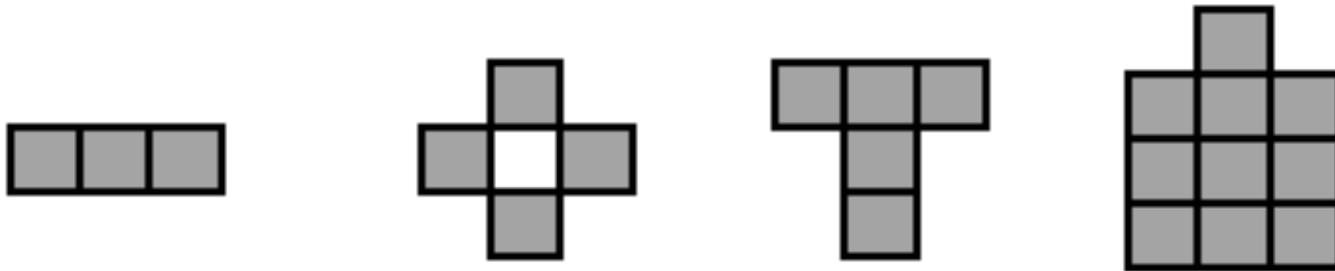

4. erode  
 $((A \circ B) \oplus B) \ominus B = (A \circ B) \bullet B$

# Hit-or-Miss Transformation

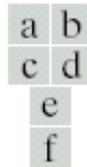

⊛ (HMT)

- find location of one shape among a set of shapes  
"template matching"

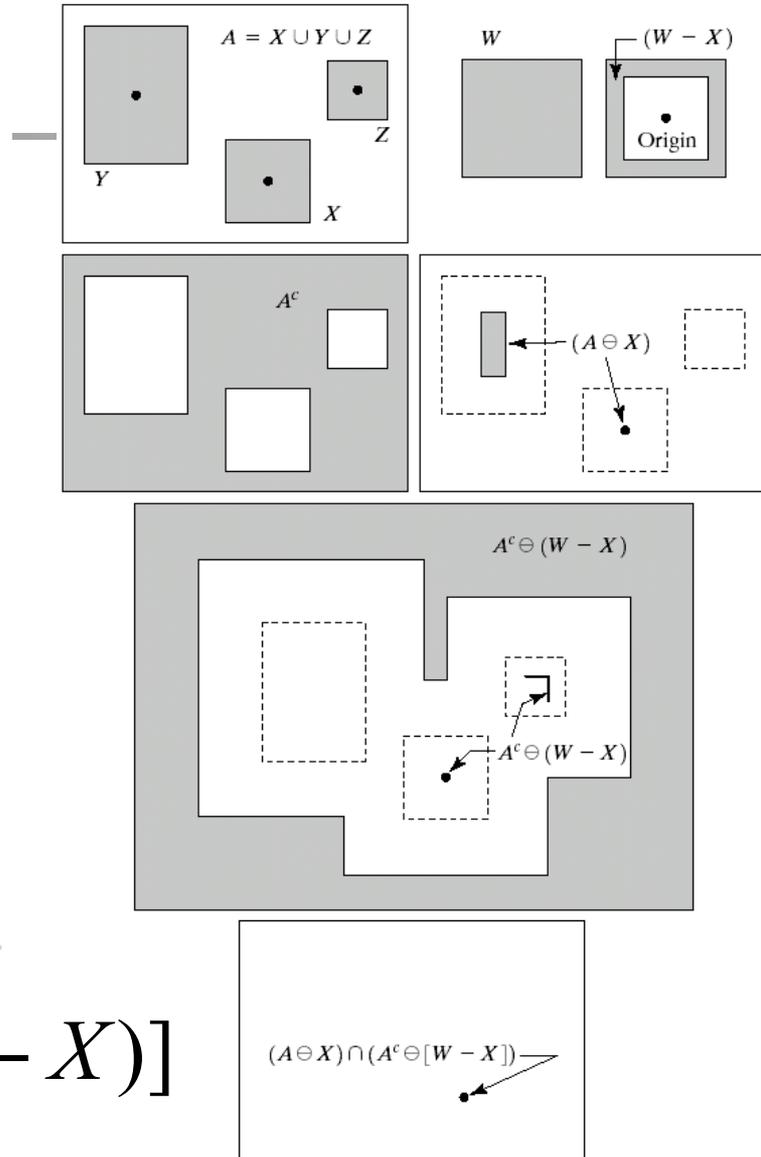

- composite SE: object part (B1) and background part (B2)
- does B1 *fits the object while, simultaneously,* B2 misses the object, i.e., *fits the background?*

# Hit-or-Miss Transformation

**FIGURE 9.12**

(a) Set  $A$ . (b) A window,  $W$ , and the local background of  $X$  with respect to  $W$ ,  $(W - X)$ .  
 (c) Complement of  $A$ . (d) Erosion of  $A$  by  $X$ .  
 (e) Erosion of  $A^c$  by  $(W - X)$ .  
 (f) Intersection of (d) and (e), showing the location of the origin of  $X$ , as desired.

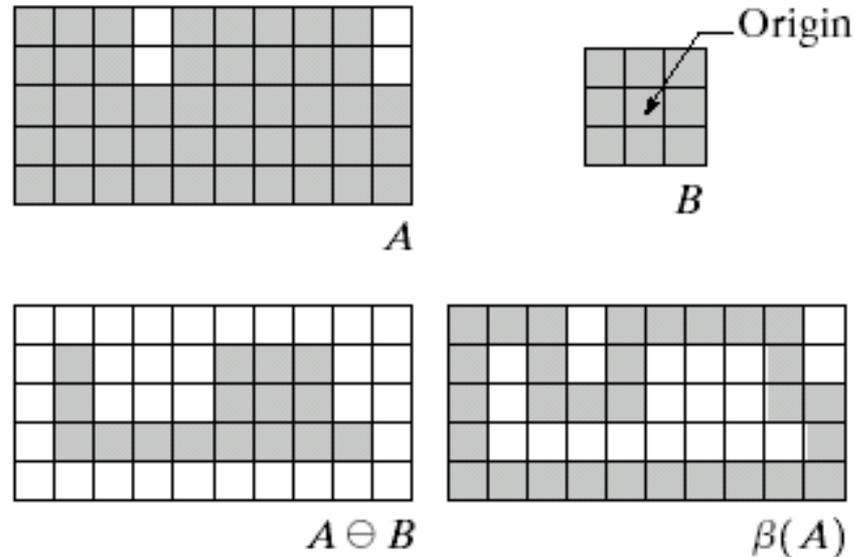

$$A \circledast B = (A \ominus X) \cap [A^c \ominus (W - X)]$$

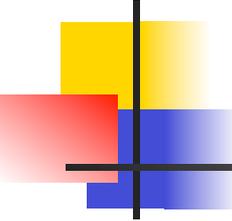

# Boundary Extraction

a	b
c	d

**FIGURE 9.13** (a) Set  $A$ . (b) Structuring element  $B$ . (c)  $A$  eroded by  $B$ . (d) Boundary, given by the set difference between  $A$  and its erosion.

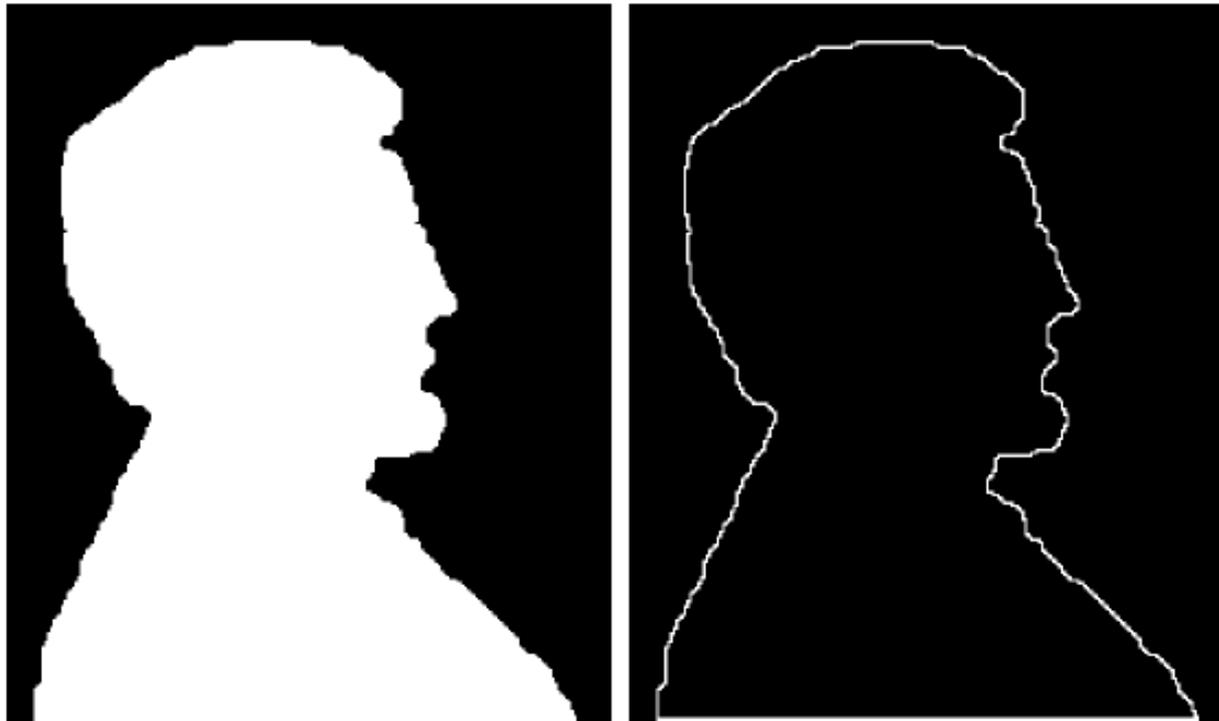

$$\beta(A) = A - (A \ominus B)$$

# Example

---

a b

**FIGURE 9.14**

(a) A simple binary image, with 1's represented in white. (b) Result of using Eq. (9.5-1) with the structuring element in Fig. 9.13(b).

---

# Region Filling

$$X_k = (X_{k-1} \oplus B) \cap A^c \quad k = 1, 2, 3, \dots$$

a	b	c
d	e	f
g	h	i

**FIGURE 9.15**

Region filling.

(a) Set  $A$ .

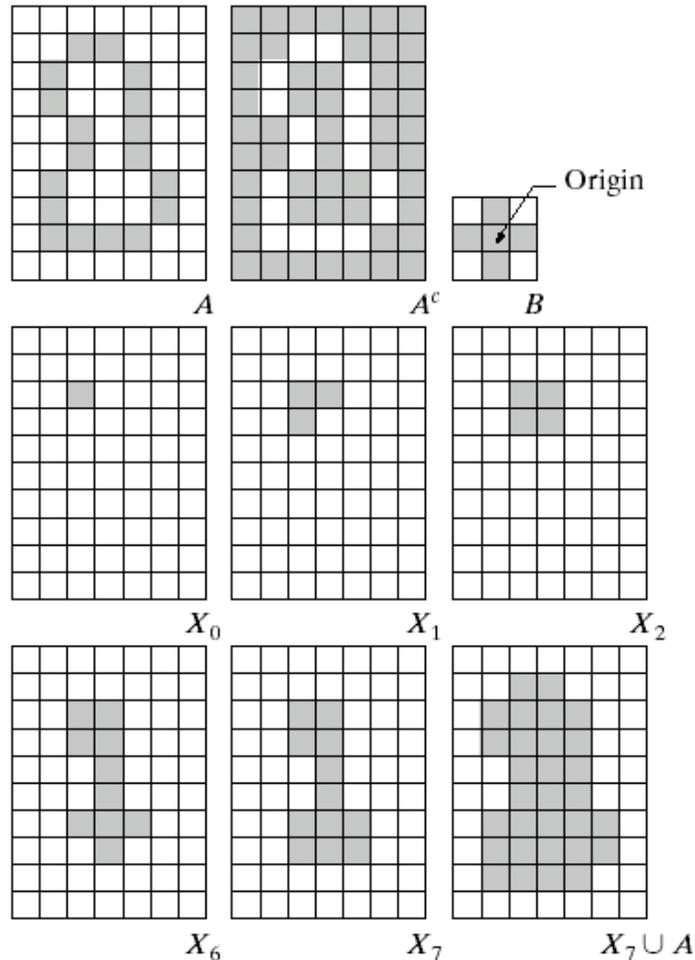

(b) Complement of  $A$ .

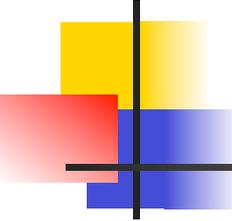

(c) Structuring element  $B$ .

(d) Initial point inside the boundary.

(e)–(h) Various steps of Eq. (9.5-2).

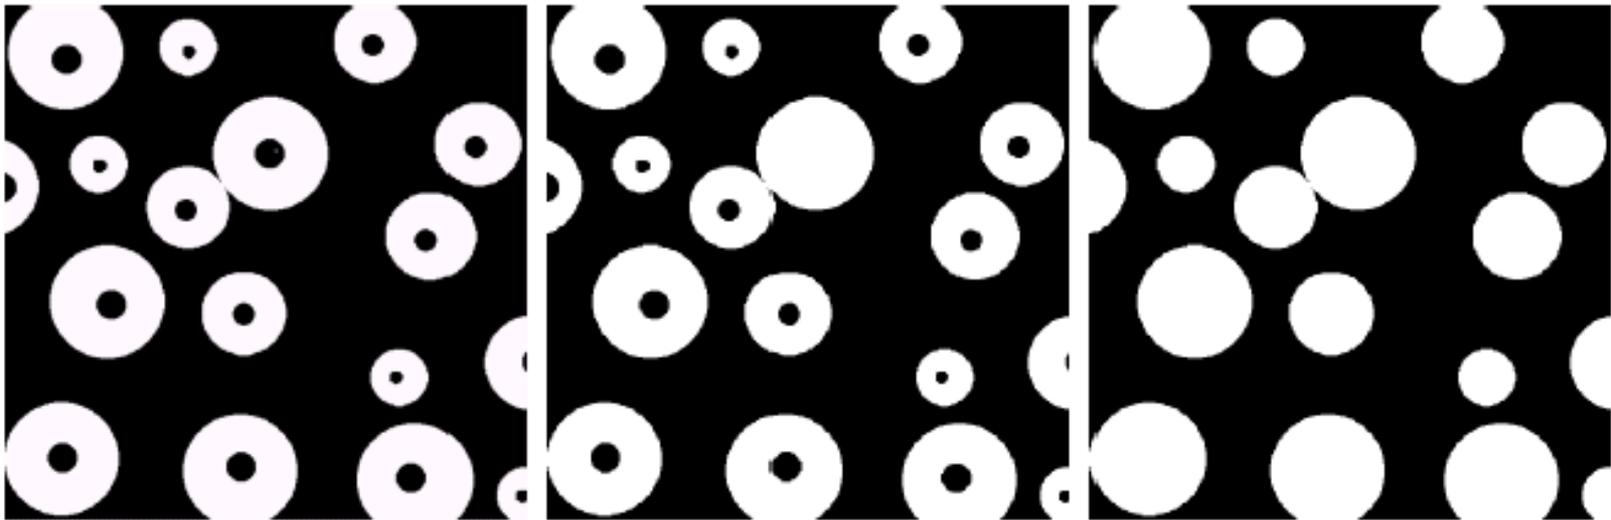

(i) Final result [union of (a) and (h)].

# Example

---

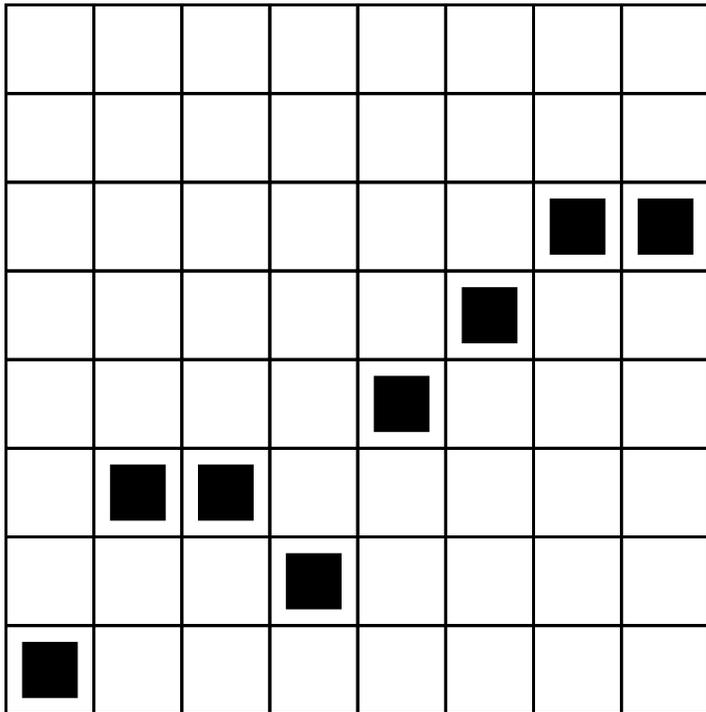

a b c

**FIGURE 9.16** (a) Binary image (the white dot inside one of the regions is the starting point for the region-filling algorithm). (b) Result of filling that region (c) Result of filling all regions.
